Automate Business Processes with Snowflake Data

AI Driven Workflows consist of two steps:

1 Sample Triggers

Use LLMs like Mistral to review contracts and flag any with unfavorable payment terms

Use Cortex ML to forecast software usage or identify anomalies in customer complaints

Transform loan applications into structured tables with AI
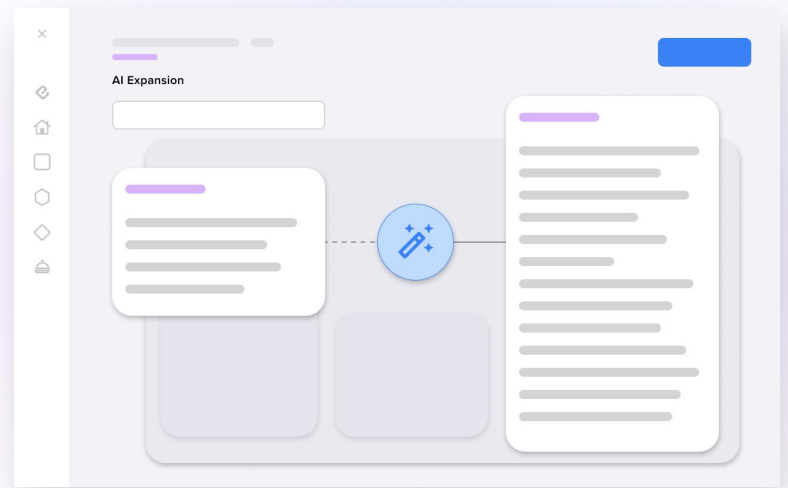

2 Sample Actions

Request approval from the Director and CFO with revised payment terms

Cancel inactive licenses in Okta or alert Customer Success with recommended resolutions

Ask GPT4o to retrieve additional context about the loan application within Snowflake

You want to Automate Your Business Processes

Analytics don't drive actions, traditional workflow platforms move data, and consultants don't scale. You need a better way.

AI. Driven. Workflows.

Elementum is a self-service business automation platform that runs securely in your Snowflake account. Use any AI, ML, or LLM to replace human analysis and automate complex business processes.

☁ **Easy to Connect**

🚀 **Easy to Deploy**

⚙ **Easy to Self-Service**

The Easiest Way to Automate

- No Code: Deploy in hours, not months
- Connected: Access Snowflake data instantly
- Smart: Pre-integrated with Snowflake Cortex AI/ML and LLMs

HERMÈS PARIS   AAM AMERICAN AXLE & MANUFACTURING   Elevance Health   UNDER ARMOUR

Choose from 100+ Workflow Templates

Get started fast with ready-to-go automations for business processes like:

Finance

Cash flow consolidation, AR/AP, audit and contract management, and loan processing

Procurement

Source-to-pay lifecycle management, RFP/RFQs, and vendor score-carding

HR

Recruiting, employee onboarding/offboarding, and employee requests

## Or, Create a No-code Workflow From Scratch

Simply select your Snowflake tables, define relationships and rules, and create processes with specific actions.

Case Study: Global Life Sciences Company

Audit Contracts and Identify Exceptions

Manual contract processing and analysis costs enterprises up to 9.2% of revenue per year, largely due to slow cycles and missed optimization opportunities.
