AI Workflows for SaaS Management

Mismanaging software spend costs $M's annually.

The average enterprise uses 664 apps, adding to $225 million annually. Nearly 50% go unused, leading to:

$ **Wasted budget**   📋 **Wasted support**   📈 **Overpriced renewals**

Faster, Smarter, Cheaper

Workflows analyze and act AUTOMATICALLY

- Reclaim unused software licenses
- Compare actual usage with contracted quantities
- Identify overlapping and under-performing apps

Use AI/ML to accelerate and optimize

- Predict inactive users with Cortex ML
- Auto-initiate reclaim license workflows
- Analyze usage patterns across sources

Save Money

$29M — 5K-10K Employees

$90M — 10K + Employees
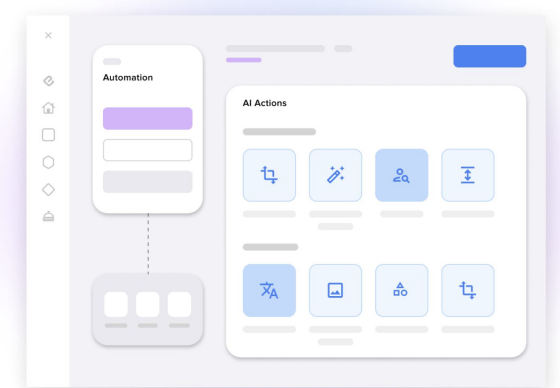

Software license management that scales

- Allocate licenses only to users who need them
- Recommend optimal users to renew with confidence
- Identify redundancies to rationalize the portfolio

Save Time

5 DAYS
per App (Manual)

Automate with no integrations and no coding

Get started in less than 30 days

1- Select license management app from Marketplace

2- Join logins and contracts tables in Snowflake

3- Pick Cortex ML Model to predict inactive licenses

4- Auto-initiate approval workflow to revoke access

5- Set rETL to ServiceNow, Okta for automatic reclaims

2 HOURS
Per App (Automated)

Sanofi **Reclaims** Millions in Unused SaaS Spend

Software license management is now fully-automated.
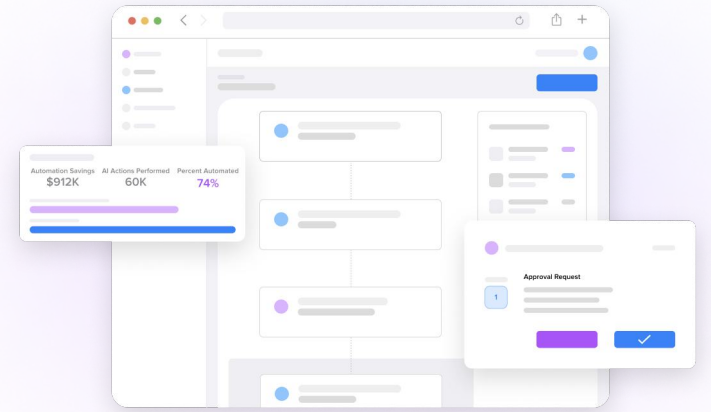

Manual SLM was inefficient and **error-prone**

Before Elementum, Sanofi's software management was:

- **Decentralized:** Email chains and Excel files
- **Time-consuming:** Manual reviews with last-minute approvals
- **Unreliable:** Inconsistent tracking and missed deadlines

"Before Elementum, we'd identify unused software licenses but still had to email people to revoke them. Now, it's hands-off. It automatically identifies inactive users, sends notifications, and handles revocations."

Jasper Lam
Data & AI Product Owner, Sanofi

100% visibility. **Zero-waste.**

With AI Driven Workflows, processes are:

- **Smart:** ML predicts inactive licenses based on usage
- **Efficient:** Auto-initiates approval workflows
- **Optimized:** Automatically reclaims unused licenses
